This book aims to enrich the thinking and discussion in relation to the importance that citizenship, immigration, rights and private laws play in the modern world. This is in a time when social cohesion and national identity is being challenged. It will explore the impact these laws have had on Australia, European Union (EU) and Slovenia. Identity and social cohesion are contested concepts and can invoke different responses. The challenges states and the EU are likely to face in retaining and even strengthening their respective identities and social cohesion from continued geopolitical shocks, security, economic volatility and environmental degradation is likely to be formidable. These alone pose some of the most complex political and policy issues facing the world. The EU can be held up as a polity that, has developed an identity and level of cohesion, while allowing member states to retain their national identities. It has, to date, also been successful in managing the rise of nationalism. However, that has come under threat in recent times. Thus, the very foundations of liberal democracy could be diluted from the impact of these challenges. Moreover, the basic foundations of rights have, in part, already been diluted from the rise of terrorism (which is acceptable), however, the geopolitical differences pose a significant challenge, in, and of themselves.

This two-volume work reviews why we should internationalise current cross border insolvency and how we could restructure laws to address inadequacies.

There is increasing regulatory interdependence amongst Central, East and South East Asia, European and North American financial markets, and these markets account for over one-third of the world ' s population and global financial markets. As these Asian markets become more integral to global financial economy, more cohesive, compatible and integrated insolvency and restructuring laws are essential. This two-volume work reviews why we should internationalise current cross-border insolvency and how we could restructure laws to address inadequacies. The two-volume work evaluates international regulatory reforms directed at detecting and managing cross-border insolvency and restructuring crises across the entire economy including financial markets. The authors call for schemes of arrangements and letters of comfort to be formally accepted as international legal tools. The work also assesses recent, but as yet unregulated developments in financial agreements, namely, the use of close-out netting provisions. They are a significant preventative legal

mechanism, protecting debtors, creditors and employees among others, before a declaration of insolvency. The book discusses international arbitration, data protection and artificial intelligence in cross-border insolvency and restructuring. Finally, it seeks a meaningful balance between self-regulation through financial contracts and other party practices, and regulation imposed by governments and international financial regulators. This extensive work will be a useful reference for legal practitioners, policy makers and scholars working on financial regulation and international financial laws.

This two-volume work reviews why we should internationalise current cross border insolvency and how we could restructure laws to address inadequacies.

This book provides a comparison and practical guide for academics, students, and the business community of the current data protection laws in selected Asia Pacific countries (Australia, India, Indonesia, Japan Malaysia, Singapore, Thailand) and the European Union. The book shows how over the past three decades the range of economic, political, and social activities that have moved to the internet has increased significantly. This technological transformation has resulted in the collection of personal data, its use and storage across international boundaries at a rate that governments have been unable to keep pace. The book highlights challenges and potential solutions related to data protection issues arising from cross-border problems in which personal data is being considered as intellectual property, within transnational contracts and in anti-trust law. The book also discusses the emerging challenges in protecting personal data and promoting cyber security. The book provides a deeper understanding of the legal risks and frameworks associated with data protection law for local, regional and global academics, students, businesses, industries, legal profession and individuals.

This book provides a comparison and practical guide of the data protection laws of Canada, China (Hong Kong, Macau, Taiwan), Laos, Philippines, South Korea, United States and Vietnam. The book builds on the first book *Data Protection Law. A Comparative Analysis of Asia-Pacific and European Approaches*, Robert Walters, Leon Trakman, Bruno Zeller. As the world comes to terms with Artificial Intelligence (AI), which now pervades the daily lives of everyone. For instance, our smart or Iphone, and smart home technology (robots, televisions, fridges and toys) access our personal data at an unprecedented level. Therefore, the security of that data is increasingly more vulnerable and can be compromised. This book examines the interface of cyber security, AI and data protection. It highlights and recommends that regulators and governments need to undertake wider research and law reform to ensure the most vulnerable in the community have their personal data protected adequately, while balancing the future benefits of the digital economy.
