A thorough presentation of analytical methods for characterizing soil chemical properties and processes, *Methods, Part 3* includes chapters on Fourier transform infrared, Raman, electron spin resonance, x-ray photoelectron, and x-ray absorption fine structure spectroscopies, and more.

Activity resource books teaching scientific principles in a vivid way via Lego, balloons, etc.

*Classic Chemistry Demonstrations* is an essential, much-used resource book for all chemistry teachers. It is a collection of chemistry experiments, many well-known others less so, for demonstration in front of a class of students from school to undergraduate age. Chemical demonstrations fulfil a number of important functions in the teaching process where practical class work is not possible. Demonstrations are often spectacular and therefore stimulating and motivating, they allow the students to see an experiment which they otherwise would not be able to share, and they allow the students to see a skilled practitioner at work. *Classic Chemistry Demonstrations* has been written by a teacher with several years' experience. It includes many well-known experiments, because these will be useful to new chemistry teachers or to scientists from other disciplines who are teaching some chemistry. They have all been trialled in schools and colleges, and the vast majority of the experiments can be carried out at normal room temperature and with easily accessible equipment. The book will prove its worth again and again as a regular source of reference for planning lessons.

An environmental journalist traces the historical war against rust, revealing how rust-related damage costs more than all other natural disasters combined and how it is combated by industrial workers, the government, universities and everyday people.

Dyeing is one of the most effective and popular methods used for colouring textiles and other materials. Dyes are employed in a variety of industries, from cosmetic production to the medical sector. The two volumes of the *Handbook of textile and industrial dyeing* provide a detailed review of the latest techniques and equipment used in the dyeing industry, as well as examining dyes and their application in a number of different industrial sectors. Volume 1 deals with the principles of dyeing and techniques used in the dyeing process, and

looks at the different types of dyes currently available. Part one begins with a general introduction to dyeing, which is followed by chapters that examine various aspects of the dyeing process, from the pre-treatment of textiles to the machinery employed. Chapters in part two then review the main types of dyes used today, including disperse dyes, acid dyes, fluorescent dyes, and many others for a diverse range of applications. With its distinguished editor and contributions from some of the world's leading authorities, the Handbook of textile and industrial dyeing is an essential reference for designers, colour technologists and product developers working in a variety of sectors, and will also be suitable for academic use. Examines dyeing and its application in a number of different industrial sectors Deals with the principles of dyeing and techniques used in the dyeing process, as well as types of dyes currently available Chapters review various dye types right through to modelling and predicting dye properties and the chemistry of dyeing

Smell is a social phenomenon, given particular meanings and values by different cultures. Odours form the building blocks of cosmologies, class hierarchies, and political odours. They can enforce social structures or transgress them, unite people or divide them, empower or disempower. The authors argue that the sociology of smell is repressed in the modern West, and its social history ignored. This book breaks the "olfactory silence" of modernity. It offers the first comprehensive exploration of the cultural role of odours in Western history - from antiquity to the present. It also covers a wide variety of non-Western societies. Its topics range from the medieval concept of the "odour of sanctity", to the aromatherapies of South America, and from olfactory stereotypes of gender and ethnicity in the modern West to the role of smell in postmodernity. Its subject matter will fascinate anyone who likes to nose around in the inner workings of culture.

Carbohydrates, proteins and lipids are all investigated and explored.
