This book examines the relationship between demographic growth and economic development in eight Arab countries. Despite a slowdown in demographic growth, as a result of the change in the age structure of the population, the labor force is increasing rapidly. In other parts of the world, similar developments have enhanced economic growth. In the Arab world, however, many of the opportunities presented by demographic transition are being lost, resulting in serious threats to the political stability of the region. The

The book goes beyond conventional analysis to ask two closely related questions. The first is, why were governments so slow in tackling stability? The second is, why has the response been similar in apparently different economies? Answers are provided using new literature in economics and economic history.

informative format book, answers will be given to many human concerns related to the economy and consumption. A large percentage of the world's citizens associate illusion with ideas related to close people. The illusion is associated with the desire to live that encourages carrying out projects, and also with joy, with hope in something, someone or positive, favorable and optimistic expectations. The illusion implies believing in dreams and feeling capable of raising them and carrying out behaviors to pursue them, being persistent to achieve them, having hope in achieving them against the adversities that may appear along the way and doing it with desire and joy. In the same way, it is closely linked to emotions, the thoughts and attitudes and the action of each one, all the

Levitt, coauthor of "Freakonomics."

The American economy, 1865-1914 is a reinterpretation of black economic history in the half-century after Emancipation. Its central theme is that economic competition and racial coercion jointly determined the material condition of the blacks. The book identifies a number of competitive processes that played important roles in protecting blacks from the racial coercion to which they were peculiarly vulnerable. It also documents the substantial economic gains realized by the black population between 1865 and 1914. Professor Higgs's account is iconoclastic. It seeks to reorganize the present conceptualization of the period and to redirect future study of black economic history in the post-Emancipation period. It raises new questions and suggests new answers to old

Television is the most influential medium in the history of mankind. More Americans own a TV than have telephones or indoor plumbing. We are 13 times more likely to watch television than read a newspaper or magazine. What Americans watch on

the "tube" is what Americans, to a significant extent, learn about life, their society and their nation. Of this there is no dispute. TV profoundly affects its viewers' attitudes on violence, sex, women, gays, and other hotly-debated social issues of our day. In *Out of Focus: Network Television and the American Economy*, Pines and Lamer examine TV's accuracy in portraying the American economy. What they find is disturbing. According to *Out of Focus*, what viewers see on TV is the American free-enterprise system distorted into a tale of catastrophes, bankruptcies, fraud, and ineptitude, populated by white businessmen who are criminals and conmen, and consumers who are stupid, gullible, and powerless. It is not surprising, then, that Americans don't understand much about their economy, and for

this, network television shares much of the blame. So concludes Out of Focus, with an unprecedented, comprehensive analysis of all network television newscasts in 1992 and a quarter of the year's entertainment programming. Unfortunately, most Americans' only source of economic information comes from their daily dose of TV (an average of 4 hours a day), and dangerous misinformation affects their personal financial decisions and their outlook on government policy. Pines sets out to end this misinformation in Out of Focus. Naming names, Pines ranks the year's best and worst economic reporters and stories. He also offers sound solutions both for journalists to improve their coverage of economic issues and for viewers to improve the quality of what they watch.

An examination of the economic analysis of the principles of accounting, this book shows that there are a number of questions for which appropriately constructed accounting data can give precise answers--whether there should be entry to or exit from an industry by a firm, for example, or whether or not a particular project should be undertaken. It not only highlights the importance of thinking clearly about the questions which are being answered with the use of accounting data; it also shows how accounts should be constructed in order to answer these questions. The authors address in particular two topical issues in accounting--the appropriate way to adjust accounts for inflation, and the appropriate treatment of deferred

Meet the economic gangster. He's the United Nations diplomat who double-parks his Mercedes on New York City streets at rush hour because the cops can't touch him--he has diplomatic immunity. He's the Chinese smuggler who dodges tariffs by magically transforming frozen chickens into frozen turkeys. The dictator, the warlord, the unscrupulous bureaucrat who bilks the developing world of billions in aid. The calculating crook who views stealing and murder as just another part of his business strategy. And, in the wrong set of circumstances, he might just be you. In *Economic Gangsters*, Raymond Fisman and Edward Miguel take

from aid programs most susceptible to corruption. In a new postscript, the authors look at how economists might use new tools to better understand, and fight back against, corruption and violence in the aftermath of the 2008 financial crisis. American markets, once a model for the world, are giving up on competition. Thomas Philippon blames the unchecked efforts of corporate lobbyists. Instead of earning profits by investing and innovating, powerful firms use political pressure to secure their advantages. The result is less efficient markets, leading to higher prices and lower wages.
