~~Geotechnical Engineering: a practical problem solving approach~~

Geotechnical engineering, also known as geotechnics, is the branch of civil engineering concerned with the engineering behavior of earth materials. It uses the principles and methods of soil mechanics and rock mechanics for the solution of engineering problems and the design of engineering works. It also relies on knowledge of geology, hydrology, geophysics, and other related sciences.

Problems integration of the governing system of partial differential equations is possible only by means of approximate numerical methods. As mentioned above, among the various numerical techniques adopted to solve geomechanical problems, two methods are commonly used in practice for geomaterials characterized by nonlinear and irreversible behavior.
