Goat Reproduction Reproductive Biology – Goats

Reproductive activity of the goat begins when the females reach puberty, which happens at 5 months of age. The ovarian or estrous cycle is the period between two consecutive estrus. It is also the time that lasts the development of the follicle in the ovary, until rupture occurs and ovulation takes place, which coincides with the appearance of estrus. This chapter will describe the ...

Goats, for the most part, are a hardy species that requires minimal, basic necessities to survive and produce a quality product. Most herd problems relate to nutrition and reproduction, but a number of diseases are of concern. Some goat diseases can also infect people, so handlers must be aware.

Dairy Goat Production

The annual reproductive cycle in goat breeds from temperate latitudes and in some local breeds from the subtropics is controlled by day length, and reproduction is seasonal with females ovulating during short days but not during long days (Gebbie et al., 1999; Lebouef et al., 2008; Delgadillo, 2011).. In seasonal breeders, sexual behavior, testicular size and sperm quality and quantity ...
