Applied On Two Cases Of Severe Snoring and obstructive sleep apnea patients because of its direct action on oral motility. The myofunctional therapy includes the correct use of the stomatognathic structures and functions by means of functional exercises (respiratory, suction, swallowing and chewing) and muscular exercises with the aim of increasing the tonus and mobility of oral and cervical structures, which can be damaged in apneic patients.

therapy treats a variety of oral and facial (orofacial) muscle (myo-) postural and functional disorders and habitual patterns. An individualized regimen of exercises are used to correct tongue and lip resting postures as well as developing correct chewing and swallowing patterns through increasing awareness to the muscles in the mouth and face.

~~Orofacial myofunctional disorders~~ — Wikipedia  
Current literature demonstrates that myofunctional therapy decreases apnea-hypopnea index by approximately 50% in adults and 62% in children. Lowest oxygen saturations, snoring, and sleepiness outcomes improve in adults. Myofunctional therapy could serve as an adjunct to other obstructive sleep apnea treatments.

Myofunctional Therapy  
Severe~~

This therapy is designed to correct oral muscle function as it relates to dental problems and speech disorders, using exercises for the tongue, lips, and facial muscles. It is most often used to alter a tongue thrust swallowing pattern, assists with improved outcomes in orthodontia, and can help open-mouth breathers to become nasal breathers.

Myofunctional therapy (MT) has become one of the newest treatments for sleep-disordered breathing.

(Camacho et al. 2015a) MT is based on daily exercises using oropharyngeal muscles in an attempt to strengthen them and facilitate opening of the airway. OSAHS originates from the lack of an optimal function of the dilator muscles of the airway.
